multiple artworks are works that can have multiple instances which can play a particular kind of role in the appreciation of those works for example there can be multiple copies of a novel or multiple performances of a musical work an ontology of multiple artworks is the first book length critical analytic treatment of the metaphysical issues relating to multiple artworks for over three decades david davies takes various considerations to which authors have appealed in arguing for ontological understandings of works in particular multiple art forms as putative explananda arguing that an adequate ontology of multiple artworks should be reflectively accountable to these after clarifying what multiplicity in the arts amounts to davies critically assesses the platonist idea that multiple artworks must be abstract or generic entities of some sort types that exist independently of our creative and appreciative practices the evolution of this idea is traced and its ability to deal with the different explananda in play in the literature is gauged the methodological constraints that should govern this kind of inquiry are also assessed on the basis of these investigations it is concluded that platonism about multiple artworks is seriously compromised different non platonist options are then considered and it is argued that the account that best explains the weighted explananda is the wollheimian type theory according to which multiple artworks are performances essentially embedded in artistic practices finally sceptical challenges to the very idea that there are such things as multiple artworks are considered

this open access book is about exploring interesting borderline cases of art it discusses the cases of gustatory and olfactory artworks focusing on food proprioceptive artworks dance martial arts and rock climbing qua proprioceptive experiences intellectual artworks philosophical and scientific

theories as well as the vague limits between painting and photography the book focuses on the author's research about what counts as art and what does not as well as on the nature of these limits overall the author defends a very inclusive view extending the limits of art and he argues for its virtues some of the limits discussed concern our senses our different perceptual modalities some concern vagueness and fuzzy boundaries between different types of works of art some concern the amount of human intention and intervention in the process of creation of an artwork and some concern the border between art and science in these various ways by understanding better such borderline cases Benovsky suggests that we get a better grip on an understanding of the nature of art

Youth Voice and Participatory Arts in Global Development looks at how arts based methods can promote youth voice and engagement in global development this book argues that engaging young people's diverse voices ideas and knowledges in matters that affect them is vital in enabling young people to become and be recognised as active citizens developing more inclusive societies and ensuring that development programmes remain accountable to the young people they aim to benefit we draw on youth led participatory research projects from across Africa Asia Europe and Latin America which used a range of art forms and engagement mechanisms including participatory filmmaking street art and the intersection of formal and non formal education through this process we develop the conceptualisation of transrational voice for epistemic justice and demonstrate the unique role that arts based methods play in enabling this broad conceptualisation of voice that accounts for the multiple dimensions of young people's knowledges and experiences this book will be of interest to researchers within international development arts and youth studies as well as to development practitioners and anyone interested in promoting epistemic justice with and for young people

This text is designed for use by college and university students who plan to teach art to children after an introduction that briefly explains the four components of discipline based art education the text is organized in six chapters 1 artists and the images they make introduces students to ideas about how several specific artists go about making art 2 when children make art gives an overview of the traditional stages of development in a child's artistic growth and offers suggestions for student lessons 3 understanding the elements of art response and production and 4 understanding the principles of art response and production enable students to become fluent in the terminology and concepts related to the vocabulary of art art production

activities offered in these chapters give students the opportunity to try their hand at making their own art chapter 5 responding to artworks art criticism art history and aesthetics encourages awareness of the criticism process that is involved in studying and understanding art suggested ways to use reproductions of artworks in the elementary classroom are given the organization of chapter 6 a narrative time line of world art is that of a chronological summary of the history of art it is designed for use as a reference activities and points to ponder regarding art and a pronunciation guide are provided the text concludes with notes and bibliography resources for art education and an index mm

in this original work on aesthetics philosopher john dilworth offers an unusual theory of the nature of artworks the double content dc view is the first comprehensive theory of art that is able to satisfactorily explain the nature of all kinds of artworks in a unified way whether paintings novels or musical and theatrical performances dilworth s basic thesis is that all such representational artworks involve two levels or kinds of representation a first stage in which a concrete artifact represents an artwork and a second stage in which that artwork in turn represents its subject matter thus dilworth describes his approach as a double content dc theory since arguably all content is the content of some representation or other this fresh even revolutionary approach to art meets strong initial opposition from other current theories of art for example those that treat paintings as physical objects or novels and other works of fiction as types that have copies or performances as instances dilworth devotes a good deal of space to a series of absorbing confrontations between his dc theory and more conventional views of art an important additional strength of the book is that it provides a fundamental theoretical advance in our understanding of pictorial representation showing that it involves two levels of representational content as opposed to a simpler single stage kind of representation found in maps or diagrams the final chapter develops a sophisticated general theory of representation based on these advances this important new work will be of great interest to philosophers cognitive scientists aestheticians artists and art educators

viewers of contemporary art are often invited to involve themselves actively in artworks by entering installations touching objects performing instructions or clicking on interactive websites why have artists sought to engage spectators in these new forms of participation in what ways does active participation affect the viewer s experience and the status of the artwork spanning a range of practices including kinetic art happenings environments

performance installations relational and new media art from the 1950s to the present this critical anthology sheds light on the history and specificity of artworks that only come to life when you the viewer are invited to do it yourself rather than a specialist topic in the history of twentieth and twenty first century art the do it yourself artwork raises broader issues concerning the role of the viewer in art the status of the artwork and the socio political relations between art and its contexts

when children look at works of art they tell stories share experiences imagine and explore this book provides teachers with the skills and freedom to design rich and open ended art experiences for young children the author looks at the work of a variety of artists and offers guidance for using these artworks as taking off points for conversations and creativity with a range of materials she demonstrates that using fine art reproductions in the early childhood curriculum allows children to construct their own meanings teaches diversity fosters thinking skills and encourages storytelling the text includes lesson ideas examples of activities and photographs of children working and interacting with one another and with works of art based on the naeyc and naea standards this teacher friendly resource provides numerous examples of open ended arts experiences using reproductions of fine art from many different genres periods cultures and sources art concepts to be used with children according to their developmental readiness easy to implement lesson ideas designed to encourage teachers to create their own to fit in with their regular early childhood curriculum
