first published in 1990 reproductive and perinatal epidemiology reviews topics that are central to reproductive and perinatal epidemiology as well as the methodological issues surrounding research in maternal and child health important topics covered include prenatal care sudden infant death syndrome sids epidemiology of neonatal brain hemorrhage early pregnancy methodological issues in drug epidemiology environmental exposures and reproduction and occupational exposures and reproduction this book is essential reading for clinicians researchers obstetricians pediatricians and graduate students in public health

population growth and global health disparities for many reproductive and perinatal outcomes are but a few of the pressing issues facing public health today despite growing interest in the field formal training in reproductive and perinatal epidemiology remains limited with few available textbooks aimed at providing an overview of the field in response to this need faculty from the Eunice Kennedy Shriver National Institute of Child Health and Human Development NICHD and CIHR's Institute of Human Development Child and Youth Health IHDCYH developed an intensive competitive summer institute in reproductive and perinatal epidemiology the curriculum of this summer institute has been developed into a textbook to provide students and researchers with a working knowledge of the substantive and methodologic issues underlying reproductive and perinatal epidemiology reproductive and perinatal epidemiology offers a core curriculum that addresses the epidemiology of major reproductive and perinatal outcomes from human fecundity to birth and neonatal outcomes the subject is approached from as international a perspective as possible and the unique methodologic issues underlying each outcome are discussed developed by leading researchers in collaboration with their students in response to their needs and concerns this is the definitive textbook on the subject

perinatal epidemiology synthesizes perinatal knowledge through the lens of public health practice this comprehensive text uses a consistent logical format to offer readers 1 a spectrum of topics affecting maternal and infant health reproductive health concerns maternal and infant morbidity and mortality and gestation and fetal growth 2 information on timely issues including infertility gestational diabetes preterm delivery postpartum depression and sids 3 detailed discussions of current epidemiological trends measures and measurement issues data sources and risk and protective factors for each condition covered 4 in depth consideration of public health interventions and their availability strengths and limitations 5 emerging areas of interest and directions for research 6 text boxes definitions of key terms discussion questions appendices and other helpful features perinatal epidemiology is a valuable ready resource for public health professionals in maternal and child

care reproduction and fertility its accessibility and easy use format make it an equally strong textbook for courses in these fields as well as for advanced medical and nursing students in ob gyn and pediatrics

the only in depth survey of perinatal epidemiology this book reviews a number of currently active fields of research and areas of public health interest in the epidemiology of perinatal disorders and covers recent advances in research methodology a thorough and timely look at a burgeoning field this volume is an ideal textbook and a valuable reference for practitioners

a conceptual paradigm for reproductive and perinatal epidemiology is presented to define the field and its spectrum of possible study outcomes followed by an overview of the relevant sensitive windows for study and substantive and methodologic issues underlying key study outcomes ranging from human fecundity to adverse birth outcomes

this unique book was conceived to satisfy the rising need for epidemiology oriented clinicians while there are many books separately devoted to epidemiology obstetrics and perinatology there are almost none bridging the gaps between these disciplines this book synthesises methodological issues in epidemiology along with the essential aspects of perinatal medicine in a straightforward accessible manner the first section mainly deals with epidemiological concepts definitions of key terms measures of disease frequency study design and validity measures of associations types of statistical analyses univariate multivariate decision analysis and meta analysis as well as practical spss approach to data all these are presented by means of examples from the perinatal world the second section is of clinical orientation it focuses on essential and controversial topics and includes preconceptional and early pregnancy concerns maternal and foetal morbidities in addition to peripartum and neonatal complications the book is concluded with timely and urging ethical issues in perinatal medicine written by international experts this sensible guide draws on methodological issues as well as evidence based data in perinatal medicine we aim to give a clear and comprehensive set of tools enabling a deeper understanding of perinatal epidemiology and practical research the book is a valuable resource for a broad spectrum of clinicians and health care professionals dealing with perinatal medicine medical and nursing students as well as residents in obstetrics and paediatrics may largely benefit from it at various stages of their training
